# INTRAC

## ABOUT INTRAC

### INTRAC was established as a brand in 1997

The origin is ARNEG S.p.A., a parent company specializing in the production of refrigerated counters for large and small retailers, commercial shelving and cold storage.

In 1997 it realized the usefulness of making a differentiation of production, guaranteeing it a distinct visibility. From this idea **INTRAC**, an acronym for “**International Rack**”, was born.

Since 1999 in the Rovigo plant, we have been producing **commercial and industrial shelves, displays for any kind of merchandise** and **checkout counters**, destined for the **food** and **non-food** sectors.

The company covers an area of **100,000 m²**, of which **40,000 m²** is covered, dedicated both to

offices and showrooms and to production. The sheet metal processing facilities are of advanced design: sheet and tube laser cutting, automatic press brakes, state-of-the-art stamping and roll forming lines; the epoxy powder coating plant meets the strictest environmental safety regulations.

Here, to this day, **ideas, new sales formats** and **retail design projects** take shape, meeting our customers' demands, with the supply of **custom-made furniture** for stores, bars and fast food restaurants.

**INTRAC** is the only **ARNEG Group** company specializing in commercial furniture.

# FEATURES

**DIVA** is our elegant line of checkout counters, a synthesis of **ergonomics** and **functionality**. The soft geometries and fine materials used give it a distinctive aesthetic, inscribed in current trends. The wide range of accessories completes the offer and meets all the needs of small, medium and large retailers.

Checkout counters **DIVA**, thanks to their structural and aesthetic features, are the ideal solution for both **furnishing** and **optimising the management of payment and customer flow** within shops, supermarkets or hypermarkets.

**Upper structure** in anodized aluminium and painted steel, with soft, shock-proof polyurethane gables and a black hard PVC bumper profile.

**Supporting lower structure** made of painted steel, rounded and oblique in shape. Floor protection by means of black ABS plastic plinths, paintable housing, optional floor fastening.

**Front module** with black antistatic PVC and polyester double ply belt. High power drive motor, oil-cooled, soft start optional. Double sensor photocells for added safety.

**Central module** made of rigidized AISI 304 steel available in 350 mm with scanner setup or 550 mm with scanner setup and cash drawer.

**Rear module** with inclined bagging area in rigidized AISI 304 steel, made in a single mould to guarantee maximum hygiene, complete with shockproof, self-extinguishing and smoke-proof soft black polyurethane bumper front.

Touch-type **electronic control panel** housed in an ergonomic position for managing all checkout counter functions.

**Register shelf** in black scratch-resistant melamine-faced wood with ABS perimeter profile, for operator service.

# ERGONOMICS

We always pay attention to our customers and design each checkout counter according to both the **actions performed by the operator**, paying attention to repetitive movements and weight shifting, and the **working position**, sitting or standing.

The design of spaces, the arrangement of equipment and accessories have an impact on posture, joints and muscles.

To ensure maximum compliance with the ergonomics requirements set by current regulations, we collaborate with **ErgoCert**, an internationally accredited body that certifies compliance with **polytechnic** and **biomedical** requirements for the models we produce.

The **number of the certificate of conformity** is given for each individual model on the presentation page.

Leg compartment section for standing posture with and without aid and sitting posture.

Arm movement area; field-of-view limits; field-of-view limits with trunk rotation.

# OPTIONAL

Customize the basic configuration of your checkout counter by choosing from our options.

## Cash management

Our checkout counters are compatible with any state-of-the-art cash management solution. Payment is made in complete security with simplified systems for the customer and the operator.

## Conveyor belt

The conveyor belt can be customised with the customer's logo by means of a vulcanisation process that ensures strength and durability.

## Trolley blocking device

The trolley blocking device in the Diva checkout counter is integrated into the leg of the unit to maintain a clean and elegant design.

## Differently able

The models in the Diva variant H line allow accessibility for differently-abled persons thanks to a support surface positioned at the end of the counter, designed to facilitate picking up and bagging groceries.
